Wrist Arthroscopy has been used for 20 years as a diagnostic test. Over the last 10 years, we have seen dramatic developments in its therapeutic application. Wrist arthroscopy is an important skill for all hand surgeons, exactly in the same way as shoulder and knee arthroscopy is crucial for orthopedic surgeons. This difficult technique has to be taught using cadavers and specific instrumentation so that surgeons learn arthroscopic techniques in a stepwise fashion.

February 21-22

2014

This course has 34 participants working on 17 surgical tables supervised by more than 14 European experts in this field, i.e. 1 expert for 2 tables. Each table is fully equipped with a camera of 2.4 mm attached to a video system. Each video system is connected to the course director's table, performs live demonstrations before participants start the procedures themselves. This course is intended for all surgeons interested in hand surgery and in particular in wrist surgery. Attending this course should allow participants to practice wrist arthroscopy proficiently and safely.
