Wrist Arthroscopy

TRAINING ON ANATOMICAL SPECIMEN

Wrist Arthroscopy has been used for 20 years as a diagnostic test. Over the last 15 years, we have seen dramatic developments in its therapeutic application. Wrist arthroscopy is an important skill for all hand surgeons, exactly in the same way as shoulder and knee arthroscopy is crucial for orthopedic surgeons. This difficult technique has to be taught using cadavers and specialized instrumentation so that surgeons learn arthroscopic techniques in a stepwise fashion.

This course has 34 participants working on 17 surgical tables supervised by more than 10 international experts in this field, i.e., 1 expert per table. The table will be fully equipped with a STORZ camera of 2.4 mm attached to a video system and the instrumentation required. The advanced course is intended for all those who have experience in wrist arthroscopy as well as for those who have already attended the basic course. It enables the participant to carry out more sophisticated techniques with the help of international experts. Teaching is both theoretical and practical and there is a high ratio of experts to participant.
